About the Authors

Andrés Torres is a professor at UMass Boston's College of Public and Community Service and acting director of the Gastón Institute. A labor economist, he is the author of *Between Melting Pot and Mosaic*, and co-editor with José Velázquez of *The Puerto Rican Movement: Voices from the Diaspora*, published in 1998 by Temple University Press.

Lisa Chavez is a Ph.D. candidate in the department of sociology at the University of California, Berkeley. She is living in Massachusetts while finishing her dissertation research examining the under-representation of Latinos at four-year colleges.

This paper is one of a series of demographic profiles that seeks to address the social and economic status of Latinos in Massachusetts.

Latinos in Massachusetts: A Mid-decade Profile

Introduction

This research report updates the socioeconomic picture of Latinos in Massachusetts. According to estimates contained in this report, the Latino population in Massachusetts experienced vigorous growth during the first half of the 1990s. Not since the 1990 census has there been a broad profile of this rapidly growing segment of the state's population.¹ This information should assist the general public in understanding some of the basic issues affecting the Hispanic community. It should also be useful to the many individuals and organizations who are concerned about the future of this community and responsible for informed decision-making: elected officials, policy makers, researchers, community-based programs, advocacy groups, community and labor organizers, the business sector, and the media.

The areas covered include statistics on population, age, education, employment, income, and poverty. Additional data on housing, health, criminal justice, social welfare, and other aspects of the Latino experience will be available in future reports.²

Table 1
Massachusetts Population by Race and Ethnicity for 1990 and 1995

	1990		1995		Percent Change April-July 1995
	Number of Persons	Percent of Population	Number of Persons	Percent of Population

Note: Based on "Population Estimates for Massachusetts Cities and Towns for 1995," a set of estimates developed by MISER.

Latino Population by Race and Ethnicity

From 1990 to 1995, the Latino community increased from 287,561 to 344,068, a 19.7% rate of expansion. By mid-decade, Hispanics constituted 5.6% of the total population of Massachusetts.

This trend paralleled similar expansion among other minority groups. The number of Blacks grew from 279,156 to 340,852. The representation of Asian Americans and Native Americans, as a combined group, also increased, from 151,726 to 182,481. The growth rates for the two groups were 22.1% and 20.3%.³

Viewed from the perspective of population share, the white population is still the largest group, at 85.9%. Latinos and Blacks are virtually identical in their proportion of the total population, at 5.6% each. Asians and Native Americans combined make up 3% of the total.

Latinos are treated as a homogeneous group throughout this study. However, readers should understand that this community is made up of a number of different national-origin groups with roots in various parts of Latin America and the Caribbean. Bound together by a common language of origin, Spanish, and by many common cultural traditions, Latinos are forging a new identity within the context of the American experience. Another important dimension of Hispanic identity is its multiracial aspect, reflecting African, European, and indigenous (Native American) heritage.⁴

The 1990 census is the most recent source of reliable data on the breakdown by country of origin of the Hispanic population in Massachusetts. In 1990, the largest Latino-origin group were Puerto Ricans, who accounted for 53% of the Hispanic population of the state. Dominicans were estimated to make up 11%, Mexicans and Cubans 4% and 3%, respectively, of the total.

Despite the lack of data since 1990 on these Hispanic subpopulations, there has been considerable anecdotal information and journalistic reporting suggesting a gradual shift in composition of the overall Hispanic population. In particular, Dominicans, Mexicans, and various Central American groups appear to have been increasing their presence in Massachusetts since the early 1990s. The 2000 census should provide enough information to ascertain the exact country-of-origin distribution among Latinos in the state. Such analysis, however, is outside the scope of this work.

Table 2
Comparison of Latino Population in
the United States and Massachusetts: 1990, 1995, 2000, and 2010

	United States			Massachusetts		
	Number of Persons	Number of Latinos	Percent of Population	Number of Persons	Number of Latinos	Percent of Population
1990	248,718,000	22,354,000	9.0	6,016,425	287,561	4.8
1995	262,755,000	26,994,000	10.3	6,137,702	344,068	5.6
Projected 2000 ^a	274,634,000	31,366,000	11.4	6,388,885	410,637	6.4
Projected 2010 ^a	297,716,000	41,139,000	13.8	6,720,604	566,731	8.4

Source: National population data from U.S. Bureau of the Census. *Statistical Abstract of the United States: 1996* (116th edition) Washington, D.C., 1996, Table 9. (Massachusetts figures from MISER).

^a National population and projection data from the U.S. Bureau of the Census. *Statistical Abstract of the United States: 1996* (116th edition), Washington, DC, 1996, Table 9 (Projections taken from the "middle series"). Projected figures for Massachusetts total state population are from MISER's "Projection of the Population: Massachusetts Cities and Towns: 2000 and 2010." (University of Massachusetts Amherst). Latinos were approximately 39 percent of the 1995 estimated nonwhite population and were assumed to constitute the same proportion of the projected nonwhite population in 2000 (1,034,350) and 2010 (1,427,534).

Comparison of Latino Population in the U.S. and Massachusetts

Given existing demographic patterns (age structure, family size, and immigration rates) and current rates of growth, the Hispanic population is expected to increase from 344,068 in 1995 to 566,731 in 2010, and represent 8.4% of the estimated statewide population.

For comparative purposes, the tables in this report give information on other racial/ethnic groups as well as Latinos, specifically, Whites, Blacks and Asians. It is not within the domain of this study to analyze conditions affecting non-Hispanics, but this information is included as an aid in assessing Latino population patterns within a broader context. All data are based on the Current Population Survey (CPS) and other governmental sources.

Population: 1995 and Projected

From 1990 to 1995, estimates suggest the Hispanic population in Massachusetts grew by almost 20%, from 287,561 to 344,068. By mid-decade, Hispanics were estimated to be 5.6% of the state's population. Blacks and Asians were estimated to represent 5.6% and 3.0%, respectively, of the total count.⁵

Estimates predict that by the year 2010, the state's Latino population will grow to 566,731, accounting for 8.4% of the state's total population.

Hispanics find themselves concentrated in about 15 cities. Three of every four Hispanics live in these 15 urban centers. Boston has the largest number of Latinos: 71,162 persons in 1995. Lawrence

Latinos as a Percent of Total Population for 1990 and 1995 by Selected Cities

There are nine Massachusetts cities in which Latinos make up at least 10% of the population. Almost three quarters of Hispanics statewide (73% or 251,037 persons) live in the 15 cities with the greatest Latino populations. Boston has the highest number of Latinos (71,162), but in several other cities Latinos form a greater share of the total population. Of all the cities described in the table, Lawrence has the largest proportion of Hispanics, estimated to be 48.4% in 1995. This is up from the 1990 figure of 41.6%. Six cities have seen at least a 25% rise in Latino population during the five-year period: Chelsea, Lynn, Waltham, Somerville, Worcester, and Lowell.

**Percent of Total Population
That Is Minority**

Between 1990 and 1995, the minority population's share of the total Massachusetts population grew from 11.9% to 14.1%. Focusing on the 10 largest urban centers presents a different picture than the situation statewide. By 1995, 31.4% of urban Massachusetts (looking at just the 10 most populous cities) was minority. In the 15 largest cities 30.4% of the population was made up of minority groups.

**Percent of Total Population That Is
Latino, Black, and Asian/American Indian**

According to estimates for 1995, in the top 10 most populous cities of Massachusetts, Latinos are 10.4%, Blacks are 15.3% and Asian/Native Americans are 5.5% of the total population. Looking at the top 15 most populated cities, the percentages are 11.7% for Latinos, 13.5% for Blacks, and 5.2% for Asian/Native Americans.

For all three groups, Boston is the highest ranking city in terms of absolute population. Other cities that rank in the top 10 for all three groups are: Worcester, Springfield, Cambridge, and Lynn.

continued from page 3

is the city with the highest proportion: 48.4%. The four fastest-growing “Latino” cities—each increasing by more than 33% between 1990 and 1995—are: Lynn, Waltham, Chelsea, and Somerville. Worcester and Lowell have experienced a growth rate in Hispanic population of about 25%.

The combined population of the state’s racial/ethnic minorities grew from 11.9% in 1990 to 14.1% in 1995. Focusing on urban centers changes this picture significantly. In the top 10 most populous cities of Massachusetts, minorities are 31.3% of the total population. Broadening this comparison to count the top 15 most populous centers, the minority population amounts to 30.4% of the total.

Age and Schooling

Hispanics are the youngest group, with a median age of 22. Because Hispanics are a relatively youthful population, trends in school enrollment outpace changes in other areas affecting the overall Latino population. This accounts for the strong growth in Latino student enrollment, 28.8% from 1990 to 1995. Hispanics face a severe disparity in educational attainment compared with other racial/ethnic groups. Among all individuals between the ages of 16 and 24, Hispanics have the highest percentage of nonenrollment (21.9%) and the lowest proportion of high school completion (44.8%).

Total School Enrollment (K-12) by Race and Ethnicity

The number of Latino students enrolled in schools rose significantly in the first half of the 1990s, from 63,632 to 81,977. This growth rate of 28.8% was the highest of all racial/ethnic groups. Asian Americans and Blacks also increased their shares significantly, by 26% and 16.8%, respectively.

As noted earlier (in table 1), the Hispanic share of overall population in Massachusetts in 1995 was 5.6%. In comparison, Hispanics made up 9.2% of all students enrolled in the public school system statewide.

New Bedford	1,435	10.5	1,863	13.1	29.8

Latinos as a Percent of Total School Enrollment by Selected Cities

In 1995, the 10 cities with the highest Latino student population were Boston, Lawrence, Springfield, Worcester, Holyoke, Lowell, Lynn, Chelsea, Brockton, and New Bedford. The five cities with the highest proportion of Hispanic students were Lawrence, Holyoke, Chelsea, Springfield and Worcester. The fastest growth in Latino student enrollment between 1990 and 1995 took place in Somerville, Lynn, Chelsea, Framingham, and Lowell.

Years of School Completed by Race and Ethnicity

Among persons age 25 and over, Latinos trail all racial/ethnic groups in years of schooling completed. They also have the lowest proportion of adults with a college degree (10.7%). Comparing Hispanics by gender, we find that females have a higher rate of college education than males: 29.1% of Latinas have had some college or have completed a college degree, compared with 20.3% of Latino males.

Among all individuals between the ages of 16 and 24, Hispanics have the highest percentage of nonenrollment (21.9%) and the lowest proportion of high school completion (44.8%).

continued from page 7

Occupation and Employment

Hispanics are overrepresented in the lower paying occupations. Latinas are concentrated in service jobs, Latinos in manual labor positions. There are more females in management and professional occupations than males. Compared with other racial/ethnic groups, they have the lowest proportion of management and professional positions (12.3%).

Occupation by Race and Ethnicity for Employed Persons Age 16–64, 1995

Hispanic workers are concentrated in three broad occupational categories: (1) technical, sales, and administrative support (25.6%); (2) operators, fabricators and laborers (25%); and (3) services (24.6%).

Contrasting female and male Hispanics, we find that females have greater employment among management/professional jobs (15.2% for females vs. 9.8% for males) and that males are characterized by a higher proportion of blue-collar jobs. The two manual labor categories of precision-production-craft-repair and operators-fabricators-laborers represent 53.7% of jobs among Latino males but only 17.2% among Latina females. On the other hand, Hispanic women are more heavily concentrated in the service occupations (32.3%) than males (17.9%). These are also fairly low-income jobs.

Hispanic unemployment of 5.9% is the second highest among all the groups, below the jobless rate of 7.4% for Blacks. Compared with other groups, Hispanics have the highest proportion of those not in the labor force. Research on Hispanics nationwide indicates a variety of possible reasons for this problem: youthfulness, lack of skills and education, the high proportion of single-head-of-household status, job discrimination, unfriendly government labor policy, and other factors.

and Ethnicity for Age 16–64, 1995**

and

**Percent Employed,
by Gender and Race and Ethnicity for
Age 16 to 64 in Poverty, 1995**

The segment of Hispanics (ages 16 to 64) that is currently not in the labor force (44.2%) is the largest among all racial/ethnic groups. Of those who are in the labor force, Hispanics have the second highest unemployment rate (5.9%) after Blacks.

There are more females than males who are not in the labor force, 53.5% compared with 33.4%. This is true for all the racial/ethnic groups, although the percentages vary.

Among those Latinos age 16 to 64 who are living in poverty, 25% are employed. White workers, however, have the highest proportion of working poor, 37.5%.

Income and Poverty

Latinos have the lowest level of annual income of all the groups, \$7,510 per person. One out of every four poor Hispanics is employed.

Among Hispanic families, poverty is the foremost problem: 46.6% of Hispanic families live below the poverty line. This issue is even more troubling among children: 54.7% of Hispanic children live in poverty. These patterns are worse than those of any other racial/ethnic group.

Table 13

Families and Children in Poverty by Race and Ethnicity

Nearly half of Hispanic families (46.6%) live in poverty. This is the highest incidence of household poverty for any group in Massachusetts. Blacks have the next highest poverty rate (26.4%). From the perspective of child poverty, the situation is even more severe. More than half (54.7%) of Latino children live in poverty. In the Black community, 40.1% of children live in poverty; among Asians, 22.7%. Statewide, the rate of family poverty is 8.8% and child poverty is 15.6%.

Per Capita Income by Race and Ethnicity

Latino average income per person is \$7,510, the lowest for any racial/ethnic group. The next lowest per capita income is \$11,659, for Blacks.

Notes for a Dialogue

The objective of this report is to encourage public dialogue about the future of Hispanics in Massachusetts. At this moment, the future seems precarious, to say the least. As we proceed with this discourse, let us be mindful of the following points:

- 1) **Latino Invisibility.** Latinos in Massachusetts need to make their voices and opinions heard much more effectively than they have in the recent past. Despite the dramatic growth in population during this decade, few elected officials feel obligated to be responsive to the needs or concerns of Latinos. Much of the commonwealth's public policy is being carried out with virtual disregard for Latino interests. This syndrome of "Latino invisibility" needs to be addressed.
- 2) **Census 2000.** Active involvement in the 2000 census is a precondition for gathering the necessary information about the community's conditions and prospects. The Latino community needs to be integrated into the census process to ensure an accurate count. Researchers need to conduct appropriate data analysis and interpretation as soon as the census results are available.
- 3) **Policy Agenda.** Latinos in Massachusetts need a comprehensive policy agenda to orient the civic and political activities of the community. The findings contained in this update—especially those dealing with education, and income and poverty, especially child poverty—call for emergency measures. But there will be little change unless the community can reach consensus about priorities and means. Our institutions and organizations need to begin a consultation process internally to define a coherent policy agenda. The Mauricio Gastón Institute is committed to facilitating those consensus-building processes that the Latino community deems appropriate.

End Notes

1. Thanks to the following persons for assistance on this report: Leslie Bowen, Mary Jo Marion, Edwin Meléndez, Daphne Richardson, and James Sterling. Thanks also to the Massachusetts Institute for Social and Economic Research (MISER) for providing the original data on which this report is based.
2. The terms “Latino” and “Hispanic” are used interchangeably in this report. The generic “Latino” will be used for convenience sake, instead of “Latino/a” which is a more accurate rendering of gender identification.
3. The estimates made by MISER do not distinguish between the two groups. The 1990 census reported that Asian Americans represented 93% of this combined figure.
4. There are several useful books for readers interested in general background literature on Latinos in the United States: Linda Chavez, *Out of the Barrio*; Antonia Darder and Rodolfo D. Torres, ed. *The Latino Studies Reader*; Richard Delgado and Jean Stefancic, ed. *The Latinola Condition*; Geoffrey Fox, *Hispanic Nation*; Earl Shorris, *Latinos: Biography of a People*; Ilan Stavans, *The Hispanic Condition*. Information about the Latino community in Massachusetts can be obtained by requesting a publications list from the Gastón Institute. See also Carol Hardy-Fanta, *Latina Politics, Latino Politics*.
5. Note on methodology: These numbers are based on estimates prepared by MISER.

The Mauricio Gastón Institute for Latino Community Development and Public Policy was established at the University of Massachusetts Boston through the initiative of Latino community activists, academicians, and the Massachusetts State Legislature, in response to a need for improved understanding of Latino experiences and living conditions in Massachusetts. The task of the institute is to inform policy makers about issues vital to the Commonwealth's growing Latino community and to provide this community with the information and analysis necessary for effective participation in public policy development.
